

1. Open up Registry Editor by clicking on the start menu and then run and typing "regedit". Click OK.

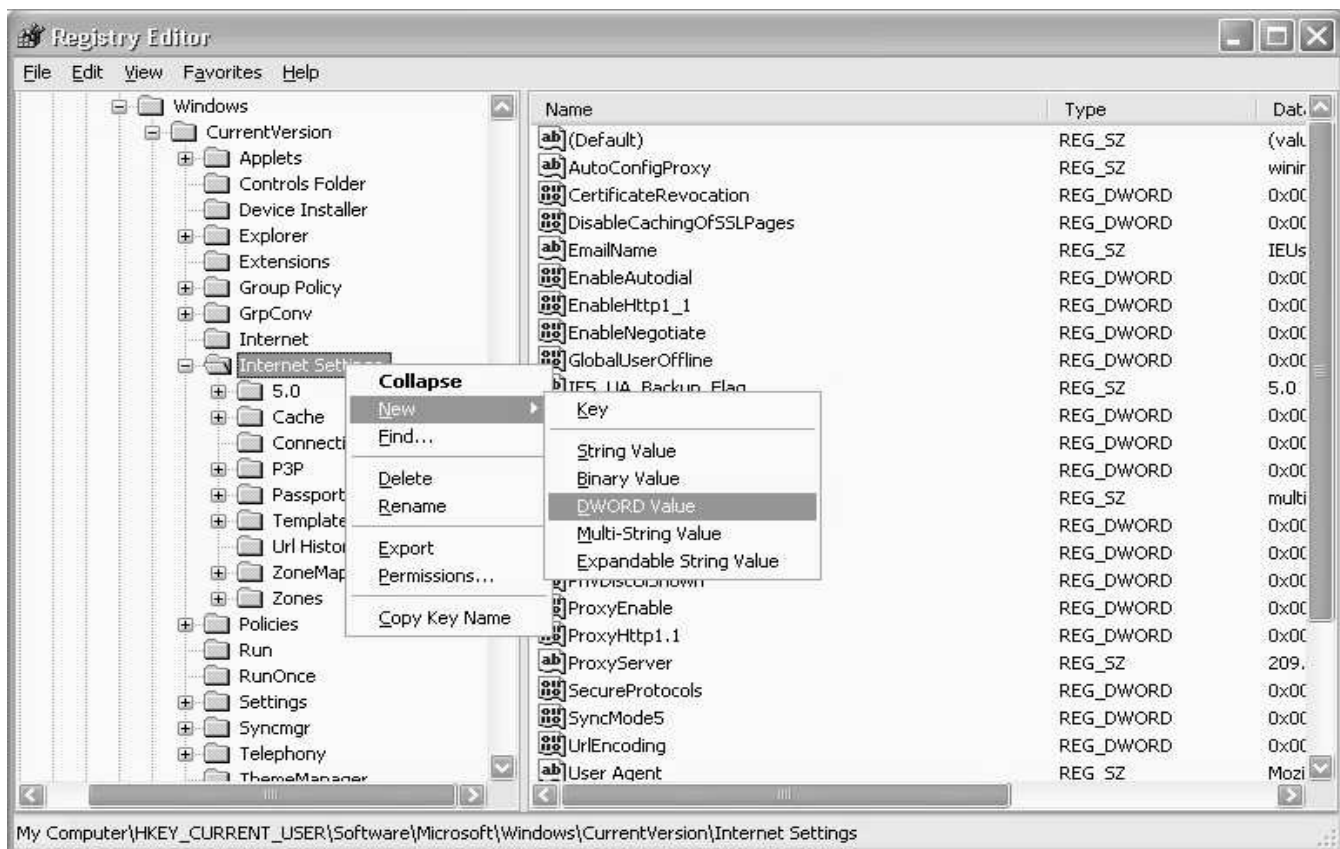

2. Locate the following key in the registry:

"HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Internet Settings"

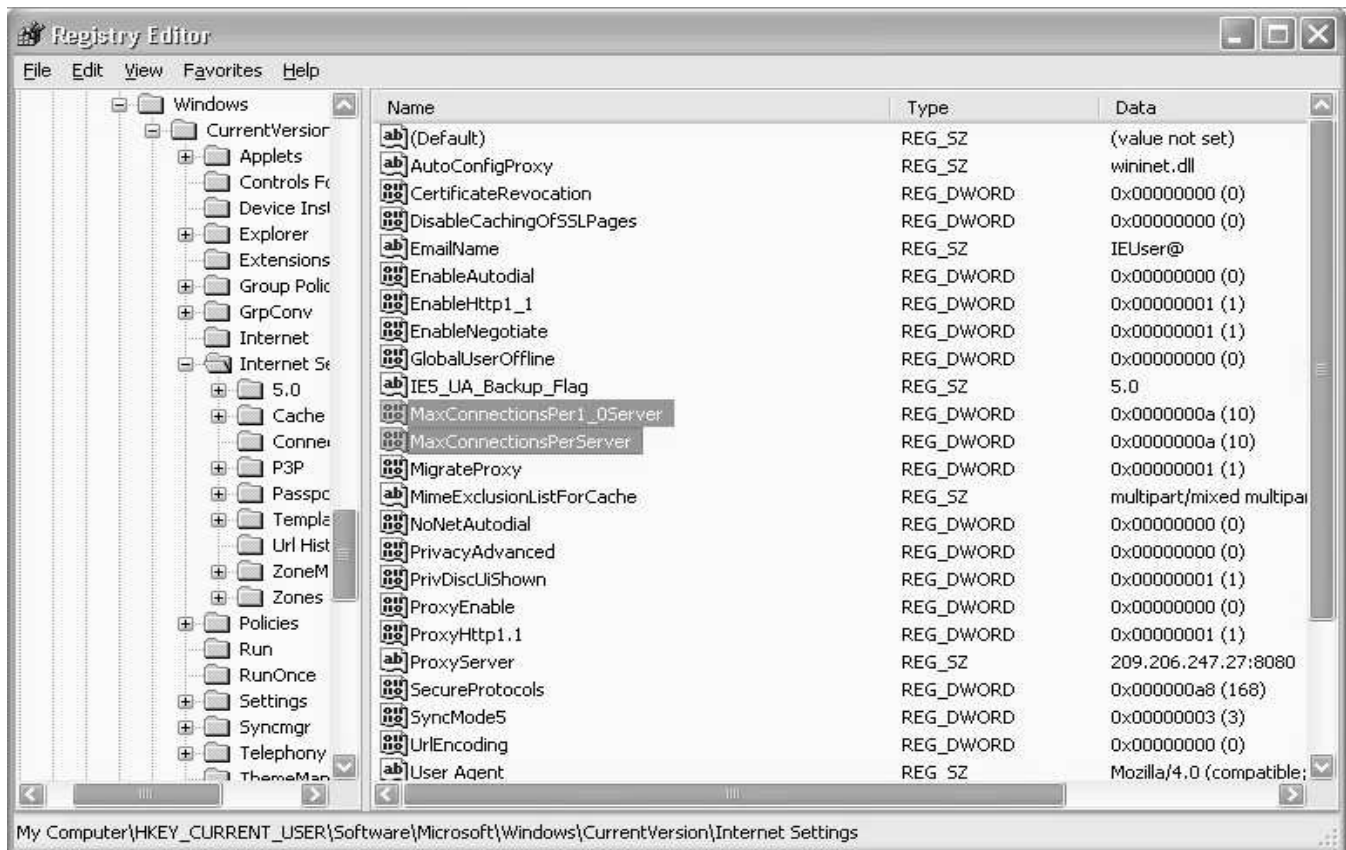

Right click the "Internet Settings" key, and then add the following registry values:

"MaxConnectionsPer1_0Server"=Dword:0000000a

"MaxConnectionsPerServer"=Dword:0000000a

3. The values should look something like this.

4. Quit Registry Editor.
